EDUCATION

Bachelors in Computer Science & Engineering

Islamic University Of Science & Technology

10/2013 - 10/2017

J&K, India

Courses

- Data Analytics on Real medical data Using R Language

SKILLS

Python

Scrapy

Crawling

Linux-servers

Git

S3

selenium

headless browser

Cloud services

Docker

Mysql

Redis

Linux

PROJECTS

Data & Crawling Engineer (03/2018 - Present)

- I was crawling around 200K URL's/month in a distributed environment of up to 7K servers in a cost-effective way & I crawl reviews & ratings from those URLs to generate a score for a major online reputation-providing company in the USA.
- In one of the projects I captured the profile of the user's on LinkedIn via automation using Selenium python then those captured profiles were used by our ML team to extract information & other things.
- Wrote automated scripts to get data from PubMed (which is a DB of references & abstracts on life science & biomedical topic) which helps our Data & ML teams.
- Getting data from Google searches on particular diseases or from Wikipedia has been a task that I have been continuously doing for some time.
